Tzu-Hsuan Lin

Los Angeles | (213) 706-4462 | lintzuhs@usc.edu | https://www.linkedin.com/in/tzuhsuan-lin/

EDUCATION

Master of Science in Computer Science May 2023 (Expected)
University of Southern California, Viterbi School of Engineering **Los Angeles, CA**

Bachelor of Science in Computer Science and Information Engineering Jan. 2021
National Central University **Taoyuan, Taiwan**
Honors GPA: 3.95/4.0

- 11th place (out of 94 groups), National Intelligent Innovation and Creation Contest, Ministry of Education, Taiwan
- 4th place (out of 51 groups), Competition of Special Project, Department of CSIE, NCU, Taiwan

Relevant Coursework: Natural Language Processing, Internet of Things, Computer Vision, Pattern Recognition

INTERNSHIP EXPERIENCE

Associate Back End Engineer, Research and Development July 2020-Dec. 2020
NextDrive Company, Taiwan

- Worked with five colleagues on designing and testing APIs for IoT products
- Completed three projects in groups. Studied Git and GitHub, ensured APIs fit product features, reviewed codes, and improved performance

RESEARCH EXPERIENCE

Advanced Computing and Networking Lab Aug. 2019-Jan. 2021
National Central University, Taiwan

- Worked with three partners on designing web-based machine learning modeling construction assistant
- Implemented four applications of Autoencoder, including dimensionality reduction, image denoising (DAE), feature extraction, and anomaly detection (VAE)

PUBLICATION

Lin, Tzu-Hsuan, and Jehn-Ruey Jiang. "Anomaly Detection with Autoencoder and Random Forest." *2020 International Computer Symposium (ICS)*. IEEE, 2020.

SKILLS

- Programming Languages: C++, Python, MATLAB, Java, Git, and Assembly Language
- Languages: Mandarin (native), English (fluent)

ACADEMIC PROJECTS

Hierarchical Discourse-level Structure for Fake News Detection Dec. 2020-Jan. 2021

- Implement Bidirectional LSTM with multi-head attention and Transformer
- Achieved a high accuracy rate of 80% for fake news detection

Fruit and vegetable price Android application June-Oct. 2020

- Led a team of four to classify fruit and vegetable using CNN MobileNet and scrap market prices with web crawler
- Earned 11th place in a national contest

Web-based time series anomaly detection using Autoencoder in Python Feb.-May 2020

- Developed a user-friendly web page that allows people without a background in deep learning to apply anomaly detection to any dataset
- Customized training parameters for users, such as activation functions, optimizers, and epochs
- Earned 4th place in the schoolwide contest
